

90° Corner Barge Flashings PVC

Roof Barge boards, sometimes known as Verges, are used at the end of a run of sheets to trim and seal off the edge of the roof. All roof barge flashings are a vital part of any profiled clad roof; they not only help to weatherproof the building but also add to it aesthetically too.

Roof Barge Boards are available in a range of finishes and colours to match or contrast our roofing sheets, depending on the look you are after. They are secured by stitching them (using st22 stitching screws) to the roofing sheet below. You will need to allow an overlap of a minimum 100mm when fitting roof barge boards end on end.

Roof Barge Boards from Cladco

Manufactured as a 3m length and refolded to a 90-degree internal angle, they will flex 10 – 15 degrees either way, dependent on your needs. Cladco Roof Barge Boards come with a safety welt to increase the strength of the material. Used at the end of a run of sheets to trim and seal off the edge of the roof.

At Cladco Profiles, we aim to accommodate wherever possible; simply give us the dimensions or drawing of the trim you need to be folded and we will do our best to accommodate you. Our roof barge board flashings come with a safety welt to increase the strength of the material.

Flashings are a necessary part of any profiled clad building and, with the range and colours that are available, can enhance the aesthetics of any structure. They come in various colours and finishes to suit metal sheeting.

Please note: The 150 x 150 flashings give a coverage of 142 x 142 due to the 8mm welt.
The 200 x 200 flashings give a coverage of 192 x 192 due to the 8mm welt.
