

Drip tray Flashings Galvanised

Cladco Drip Tray Flashings are manufactured in 3-metre lengths and are available in all PVC, Prelaq Mica, Poly Coatings and Galvanised and Colours. Drip Tray Roof Flashings are made with a safety welt to improve strength and soften the edges of the Flashing.

Used to create a course for rainwater run-off, they are designed to be installed over doors and windows to prevent any water leakage from above.

At Cladco Profiles, we aim to accommodate wherever possible, and so if you require a custom-made Flashing for your roofing project, simply provide us with the dimensions of the trim required and we will endeavour to accommodate this for a truly bespoke finish.

Roof Flashings are a necessary part of any profiled clad building and with the range of colours and coatings that are available, can enhance the aesthetics and practicality of any structure.

*Please note, we recommend always wearing appropriate safety gloves and clothing when handling or carrying any Roof Sheets or Flashings, due to the sharp edges and heavy nature of the products.

SPECIFICATIONS	
Length	3 metres
Sizes available	100mm x 40mm x 20mm x 10mm

PLEASE NOTE - Extra care should always be taken when handling metal sheets and flashings we advise using the correct type of Glove when handling or moving metal sheets and flashings.
