

FIBRE CEMENT BACKER BOARD COUNTERSUNK SCREWS

Cladco backer board screws provide a secure, long-lasting fixing for fibre cement backer boards in bathrooms, wet rooms, kitchens and other high-moisture areas. Manufactured to industry standards for pull-out strength and corrosion resistance, they deliver a flush and neat finish that is ready for tiling or further installations.

MATERIALS

Manufactured from durable Ruspert® coated steel for long-lasting protection against corrosion and for a reliable performance.

DURABILITY

These flush-fitting countersunk screws are manufactured to industry standards for pull-out strength and corrosion resistance, providing a secure and long-lasting fixing.

ACCESSORIES

Compatible with Cladco fibre cement backer boards and adhesives.

EASY TO USE

Space fixings 200mm around the perimeter and 300mm across from the centre, keeping screws 25mm from the edge of the board.

LONG-LASTING

The protective coating ensures reliable, long-lasting performance in high moisture conditions.

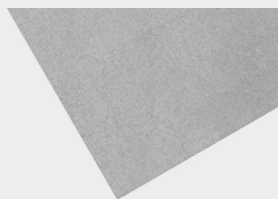

INSTALLATION ADVICE

As a general guide, allow 8 screws per 1200 × 600mm board. Position fixings approximately 25mm in from board edges and corners, following the board manufacturer's fixing grid and centres. Where PU adhesives are used, these fixings help resist slight expansion as the adhesive cures. Be careful not to over-drive screws to avoid breakage or instability in future.

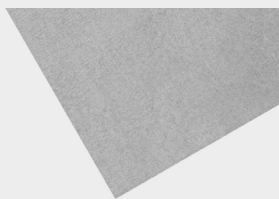

Best Use:

- **25mm:** Use with 6-9mm boards over timber floors
- **38mm:** Best for 9-12mm boards, stud walls or deeper embedment
