

ROOFING TOOLKIT

STANDING SEAM RANGE

The Cladco standing seam tool kit provides everything required for the professional installation of Cladco standing seam roofing sheets. Supplied in one convenient box, the kit ensures you have the correct branded tools on hand, without the need to purchase items individually or worry about compatibility. Inside the kit are specialist tools designed for use with Cladco sheeting, allowing you to create clean folds, secure seams and precise edges for a watertight, professional finish.

(Tin Snips) TOOLTINSNIPS
(Mallet) TOOLMALLET

BOX CONTENTS

- Hand Seaming Folder (22cm fold)
- Hand Edge Folding Tool (45cm long)
- Straight Seaming Pliers (80mm)
- 45° Offset Seaming Pliers (80mm)
- Aviation Tin Snips (10-inch)
- Rubber Mallet (16oz)

SEAMER

Designed to neatly fold the edges of metal sheets, creating an upstand along each side of the panel. This upstand forms the foundation of the standing seam system, allowing adjacent sheets to interlock securely.

EDGE FOLDER

Used to create neat, even folds along the longer edges of standing seam sheets. Ideal for forming finishing folds, for example, when bending the sheet edge over an eaves flashing to produce a neat, secure and watertight finish.

PLIERS

Used for clamping and closing seams or flashings during installation. The offset version allows better access to tight or angled areas, while both tools help form a secure, uniform connection between sheets and trims.

TIN SNIPS

This pair of aviation tin snips allows you to cut through standing seam metal sheets with ease and precision. The ergonomic handles provide comfort and control, helping you make clean, accurate cuts.

RUBBER Mallet

This 16oz rubber mallet is used to gently tap panels and seams into place, ensuring a tight and secure join between standing seam sheets without causing dents or surface damage.

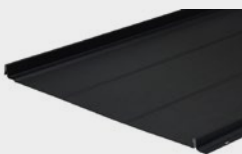

INSTALLATION ADVICE
